

The Green Dragon Environmental Standard is an award that shows organisations are following good environmental standards. Track 2000 currently has a level 2 award

The Green Dragon Environmental Standard® incorporates the following key principles of Environmental Management:

Continual Environmental Improvement

Compliance with Environmental Legislation

Pollution Prevention

Communication of Environmental Issues

There are five Levels within the Green Dragon Environmental Standard®, each incorporating the key elements of:

- Planning
- Taking Action
- Checking Progress
- Reviewing Achievements

to realise continual environmental improvement. As each level addresses these elements, albeit with a different amount of detail as the Levels increase, this means even at Level One, you have a full, accredited, Environmental Management System.
